Better Profit

SPECIFICATIONS

POWER SUPPLY

Mains AC 220V,50Hz(BD) AC 240V,50Hz(BA)

Batteries DC 9V,"C" size or UM-2 flashlight batteries x 6

POWER CONSUMPTION 12W

POWER OUTPUT 4.4W total (maximum)

SPEAKERS 92mm, 4 ohms, dynamic (x 4) 20mm, piezo, (x 2)

DIMENSIONS 594(W) x 135(H) x 150(D) mm

WEIGHT 3.5kg (without batteries)

RADIO SECTION

Tuning Range FM : 87.5 - 108 MHz

MW : 530 - 1605 kHz

SW : 5.8 - 18.5 MHz

(51.7 - 16.2 m)

Antenna System FM : Telescopic antenna

MW/SW : Built-in ferrite bar antenna

FM Stereo Separation 30 dB (at 1kHz)

STEREO CASSETTE RECORDER SECTION

Type 4-track, 2-channel stereo or monaural
double recording

Tape Speed 4.75 cm/sec.

Rewind Time 180 sec. (approx.) with C60 cassette tape

Wow and Flutter 0.3% (WRMS)

Frequency Response 100 - 8000 Hz (normal)

JACKS

External Microphone 0.5mV/15kohm

AUX 100mV/47kohm

Mix. Microphone 0.4mV/3.3kohm

Headphone 32 ohm

Specifications may be changed without notice.

| 39. Left Channel AUX IN Jack | |

DISASSEMBLY

FRONT CABINET REMOVAL

1. Open the Compartment Lids by pressing the Stop/Eject Buttons and remove the cassette tapes from the compartments.
2. Remove the Battery Compartment Lid. Then remove the batteries.
3. Remove the eight Knobs (volume L ch, R ch, function and five equalizer).
4. Remove the five screws (A) fastening the Rear Cabinet.
5. Open the Cassette Compartment Lids by pressing the Stop/Eject Buttons and pull out the Front Cabinet away from the unit.
6. Reassembly in the reverse order.

EQUALIZER PC BOARD REMOVAL

1. Follow the instructions "Front Cabinet Removal".
2. Remove the Equalizer PC Board completely, disconnect one connector (connector 6) from Tape PC Board.

CASSETTE MECHANISM REMOVAL

1. Follow the instructions "Front Cabinet and Equalizer PC Board Removal".
2. Remove the Tuning Knob, Pointer Belt and Pulley.
3. Remove the three screws (B).
4. To remove the Cassette Mechanism, disconnect three lead wire connectors (connector 3, connector 4 and connector 5) from Tape PC Board.

RADIO CHASSIS REMOVAL

1. Follow the instructions "Front Cabinet, Equalizer PC Board and Cassette Mechanism Removal".
2. Remove the two screws (C).
3. To remove Radio Chassis, disconnect one lead wire connector (connector 1) from Tape PC Board, and disconnect telescopic antenna lead wire (white) from Radio PC Board.

TAPE PC BOARD AND POWER SUPPLY PC BOARD REMOVAL

1. Follow the instructions "Front Cabinet, Equalizer PC Board, Cassette Mechanism and Radio Chassis Removal".
2. Remove the three screws (D). Pull out the Power Supply PC Board away from the Rear Cabinet, and disconnect one lead wire connector (connector 2) from Tape PC Board.
3. Pull out the Tape PC Board.

RADIO PC BOARD REMOVAL

1. Follow the instructions "Front Cabinet, Equalizer PC Board, Cassette Mechanism and Radio Chassis Removal".
2. Remove the two screws (E).
3. Pull out the Radio Chassis and Tuning Gear.

MECHANISM ADJUSTMENT

WINDING TORQUE ADJUSTMENT

1. Insert a cassette torque meter and measure in each mode.
Play, FF and Rewind, measure at the end of the tape when the tape has stopped running.

Take-up Torque: 35 to 60g/cm
Fast-Forward Torque: 50 to 120g/cm
Rewind Torque: 50 to 120g/cm

2. If the winding torque is not adequate, wipe the Flywheel (43 and 44), Riwind/FF Pulley Arm Ass'y (39), and/or replace the Rewind/FF Belt (42).

PINCH ROLLER ADJUSTMENT

1. While keeping the unit in the playback mode, measure the Pinch Roller contact with a Spring Gauge (0 to 500 g gauge).

A Pinch Roller force to 260 to 320 g is required.

2. Hook the Spring Gauge to the Pinch Roller and pull it away from the Capstan.

Moment when the Pinch Roller comes in contact with the Capstan (when the Pinch Roller starts re-revolving).

3. To adjust the contact pressure, bend the Pinch Roller Spring (36), and/or replace Pinch Roller Spring.

CHECKING OPERATION OF AUTO STOP

1. When the tape comes to the end, Sensing Plate Ass'y (28) begins to move due to tape tension and induces Auto Lever (20) action.

The auto lever is operated by contact with a Claw on the Take-up Reel (52), which releases the Push Button Actuator (3).

2. Confirm that Sensing Plate Ass'y and Auto Lever move smoothly as you move the Sensing Plate Ass'y in playback mode.

DIAL POINT SETTING

If the Tuning Gear (406) has been removed for some reason, it must be reinstalled properly following the steps below before installation of the Tuning Knob (225), the Pointer Belt (227), and the Pointer Belt Pulley (222).

1. Turn the tuning capacitor shaft counterclockwise until it stops.
2. Mount the Tuning Gear (406) on the tuning capacitor shaft so that the two small nodes on the Tuning Gear are located on the righthand side of the vertical center line of the tuning gear.

To install the Tuning Knob (225), Pointer Belt (227), and Pointer Belt Pulley (222), follow the steps below.

1. Be sure the Tuning Capacitor is in its most counterclockwise position.
2. Put the Pointer Belt (227) on the Pointer Belt Pulley (222), and snap the Pulley in the Pulley Base (223).
3. Position the Pointer Belt so that adjust line on the belt is check position the Pulley Base, and the pointer marking is located near to the right end of the belt. See the illustration above.
4. Keeping the Pointer Belt (227) in the position mentioned above, put the other end of the Pointer Belt on the Tuning Knob (225), and snap the Tuning Knob in its catches making sure the gears are meshed properly.

ELECTRICAL ADJUSTMENT

TAPE SPEED ADJUSTMENT

1. Set the Tape speed switch to the normal position.
2. Connect a Frequency Counter to the EXT SP. (L ch) Jack across 4 ohm dummy load.
3. Adjust the potentiometer in the Motor to make the counter reading 3045Hz while playing back (Cassette 1) 3000Hz test tape.

RECORD/PLAYBACK HEAD AZIMUTH ADJUSTMENT, CASSETTE 1 AND CASSETTE 2

1. Connect a SSVM or Oscilloscope to each of the EXT SP. (L and R ch.) Jack (Dummy load 4 ohm).
2. Playback an 8kHz test tape and turn the Azimuth Adjustment Screw to obtain the maximum output of the left and right channels.
3. When the output level of the left and right channels differs, readjust to make the both channels at the same level.
4. After adjustment, remove the Up Case and secure the screws with paint or glue.

TUNER ALIGNMENT PROCEDURES

Equipment required

1. AM S. G.
2. Loop Antenna
3. Voltmeter (SSVM)
4. Scope
5. Counter
6. FM S. G.
7. Dummy load 300k-ohm, 32-ohm

AM IF ALIGNMENT (Figures 1 and 7)

Step	Alignment	Frequency of Signal Generator	Tuning Dial Setting	Adjustment	Remarks
	IF Calibration	455kHz	Low End	T2 and L4	Obtain sine-wave and maximum amplitude. 

SW ALIGNMENT (Figures 2 and 7)

Step	Alignment	Freuquency of Signal Generator	Tuning Dial Setting	Adjustment	Remarks
1	Tuning Range Calibration	5.8MHz	Low End	L8	Obtain sine-wave and Maximum amplitude. <div>Max. </div>
2		18.5MHz	High End	TC5	
3	Adjustment of Tracking	7MHz	7MHz	L6	
4		16MHz	16MHz	TC3	
5	Repeat the above adjustment.				

MW ALIGNMENT (Figures 2 and 7)

Step	Alignment	Frequency of Signal Generator	Tuning Dial Setting	Adjustment	Remarks
1	Tuning Range Calibration	515kHz	Low End	L7	Obtain sine-wave and maximum amplitude. <div>Max. </div>
2		1635kHz	High End	TC6	
3	Adjustment of Tracking	600kHz	600kHz	L5	
4		1400kHz	1400kHz	TC4	
5	Repeat the above adjustment.				

FM ALIGNMENT (Figures 3,4,5 and 7)

Step	Alignment	Frequency of Signal Generator	Tuning Dial Setting	Adjustment	Remarks
1	IF Calibration	10.7MHz	Low End	Turn L3 fully counter-clockwise.	
2				T1	Obtain symmetrical curve and maximum amplitude. 
3				L3	Obtain S curve and maximum amplitude. 
4	Tuning Range Calibration	87.5MHz	Low End	L2	Obtain sine-wave and maximum amplitude. 
5		108MHz	High End	TC2	
6	Adjustment of Tracking	90MHz	90MHz	L1	
7		106MHz	106MHz	TC1	
8	Repeat the above adjustments.				

FM STEREO ADJUSTMENT (Figures 6 and 7)

1. Connect a frequency counter with a 300k ohm dummy load to test points TP5 and TP2.
2. Set positions:
 TAPE/RADIO Switch : RADIO position
 BAND SELECTOR Switch : FM STEREO position
3. Adjust VR1 on the Tuner PCB for a frequency counter reading of 38.00kHz \pm 100Hz.

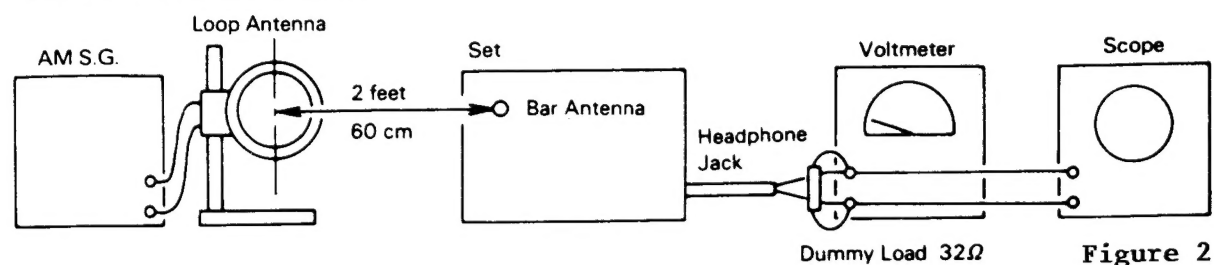

REMARKS:

- 1) When aligning FM IF, the symmetrical curve may not be obtained by setting the marker of the Sweep Generator (10.7MHz). This is due to the ceramic filter used in the unit. Regardless of the marker, align the curve as symmetrically as possible with peak output.
- 2) When aligning the Tuning Range and adjusting the Tracking, proceed with alignment in a sequence of SW→MW→FM.
- 3) Use a screwdriver with a plastic grip for all alignments.
